

Course Code: ESC106A

**Course Title: Construction Materials and Engineering
Mechanics**

**Lecture No. 28:
Problems on Beams**

Delivered By: Nimmy Mariam Abraham

Lecture Intended Learning Outcomes

At the end of this lecture, students will be able to:

- Identify the type of support and support reactions
- Apply the conditions of equilibrium
- Calculate the reactions for the beams

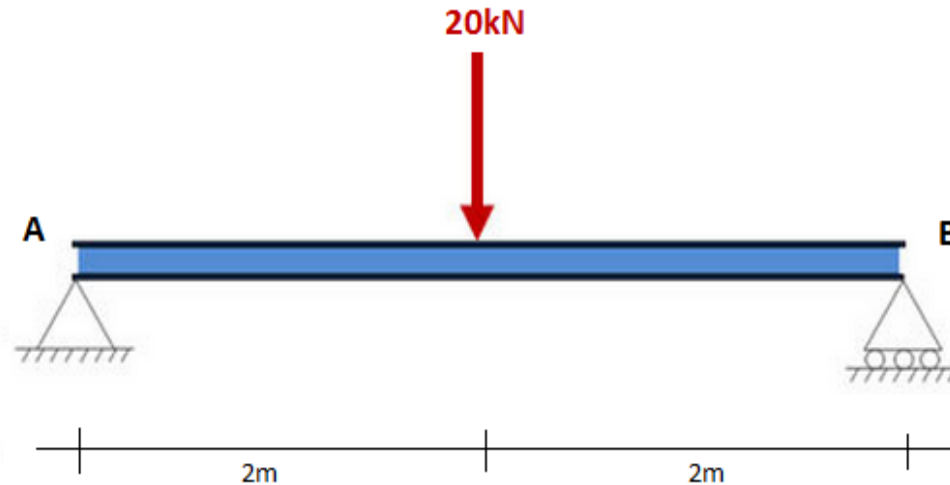

Contents

Type of support, support reactions, problems on support reactions

Problems on Supports

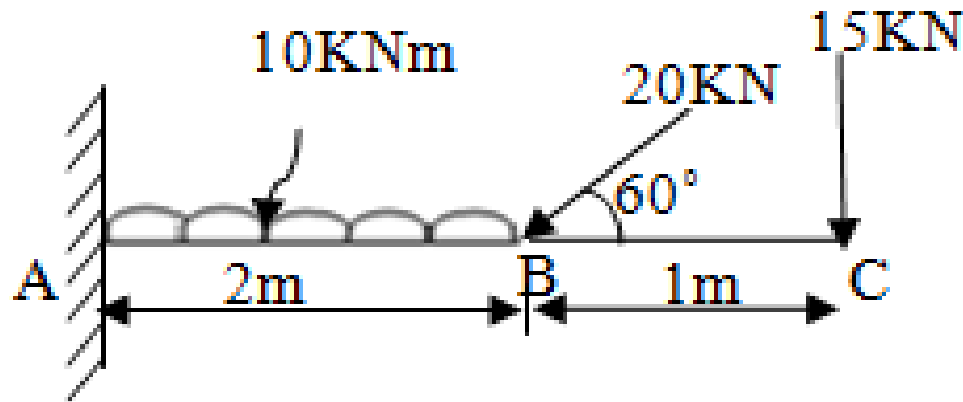

1. Determine the reactions developed in the support in the beam as shown in the figure

$$R_{AV}=10\text{kN}$$
$$R_{BV}=10\text{kN}$$

Problems on Supports

2. Determine the reactions developed in the support in the beam as shown in the figure

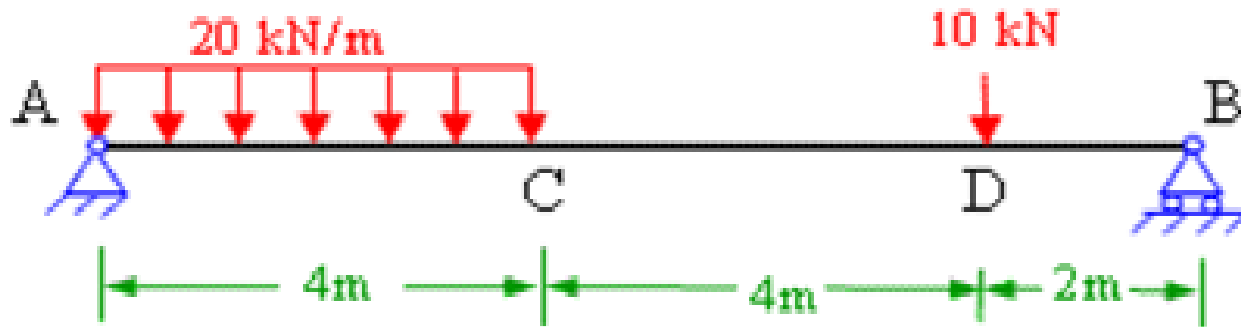

$$\begin{aligned}R_{AH} &= 10 \text{ kN} \\R_{AV} &= 52.32 \text{ kN} \\M_A &= 99.64 \text{ kNm}\end{aligned}$$

Problems on Supports

3. Determine the reactions developed in the support in the beam as shown in the figure

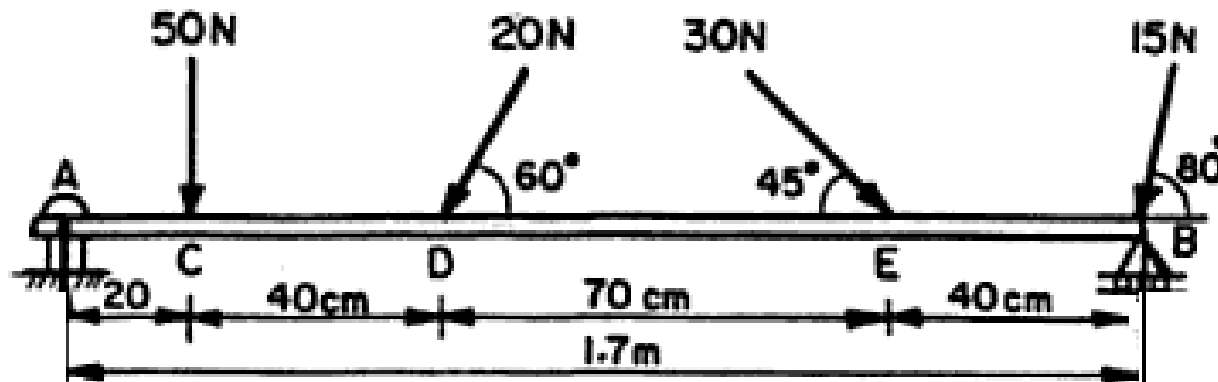

$$R_{AV} = 66 \text{ kN}$$

$$R_{BV} = 24 \text{ kN}$$

Problems on Supports

4. Determine the reactions developed in the support in the beam as shown in the figure . A has a hinged support.

$$R_{AH} = -8.61 \text{ kN}$$

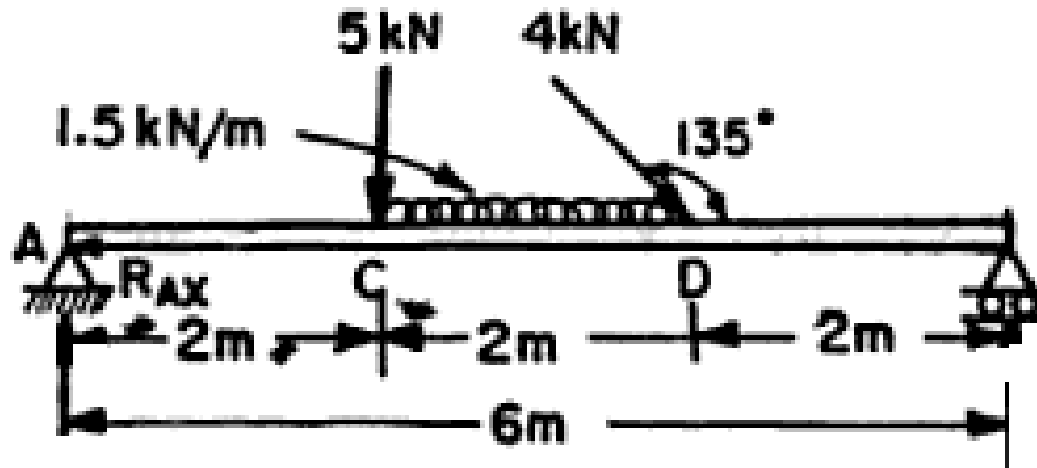

$$R_{AV} = 60.32 \text{ kN}$$

$$R_{BV} = 42.98 \text{ kN}$$

Problems on Supports

5. Determine the reactions developed in the support in the beam as shown in the figure

$$R_{AH} = 2.828 \text{ kN}$$

$$R_{AV} = 5.776 \text{ kN}$$

$$R_{BV} = 5.052 \text{ kN}$$

Summary

- Based on the types of supports and the type of loading, the reactions developed in each support can be calculated
